

Since 2005, more than **300 million people** have already witnessed the benefits of **inteliLIGHT®**, in hundreds of cities on 5 continents

inteli**CITY**®

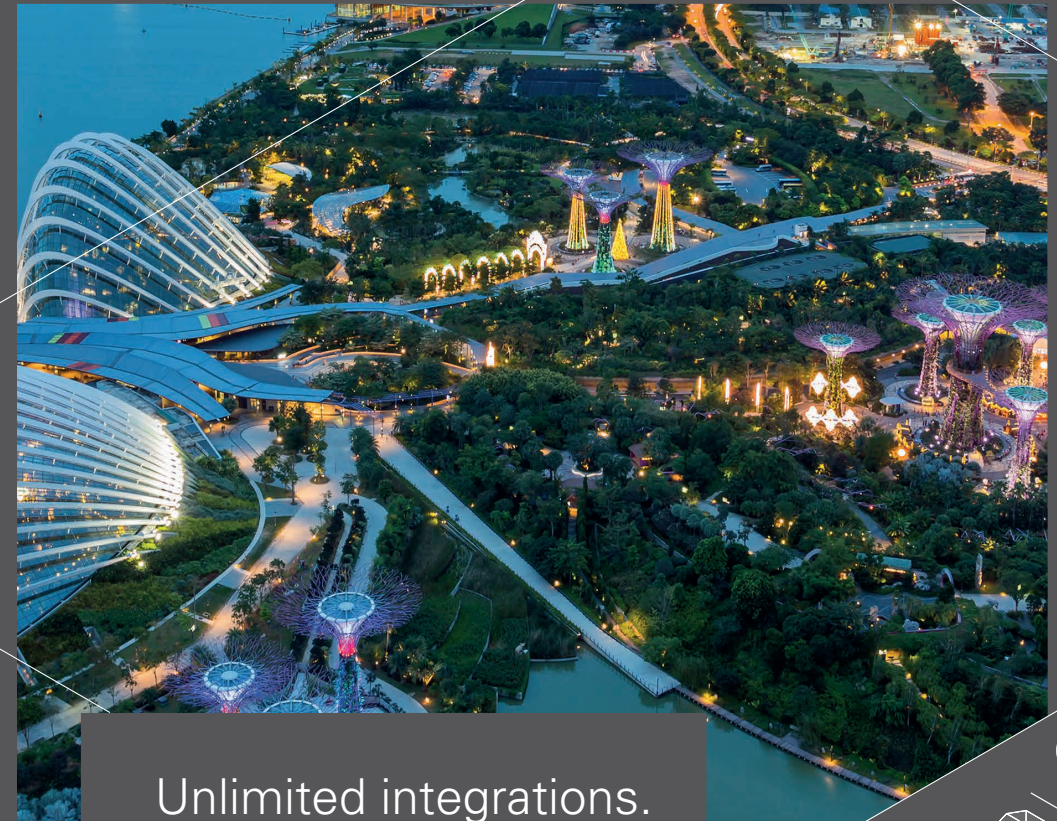

Santiago, Chile

- › 70 000 streetlamps
- › Pole-mounted and NEMA controllers
- › LoRaWAN™ and Cellular communications
- › inteliCITY® Software
- › Smart city integrations

Brescia, Italy

- › 44 000 streetlamps
- › Individual and segment control
- › Zhaga controllers
- › Integrated with public LoRaWAN™ network
- › inteliCITY® Software

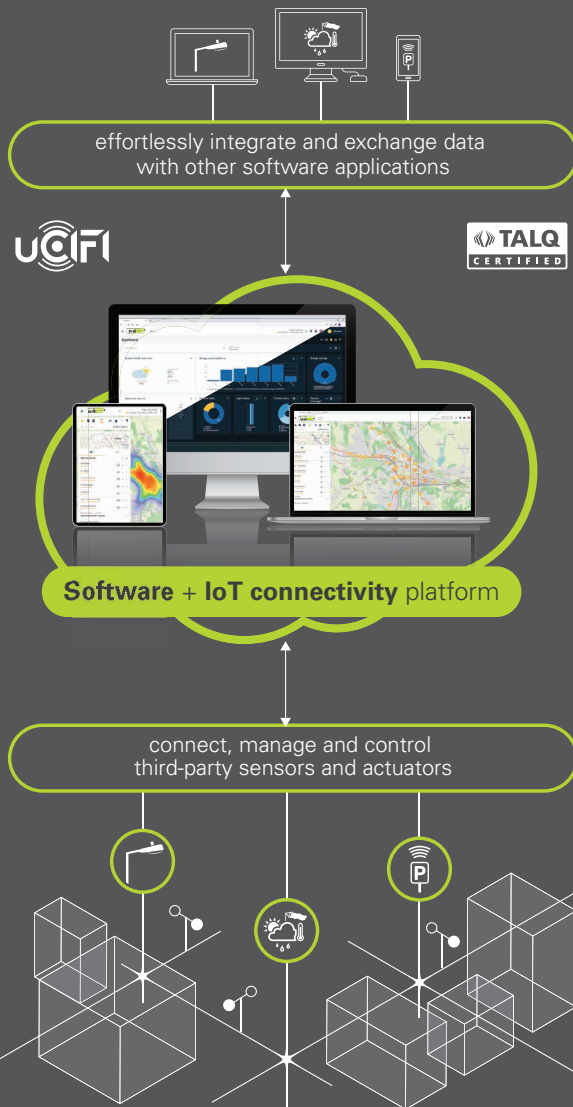

Unlimited integrations. Centralized city management.

Unify all city functions, from street lighting and traffic control to parking and waste disposal, saving city managers' time and unlocking city synergies with a seamless, future-proof smart city ecosystem.

inteliCITY®

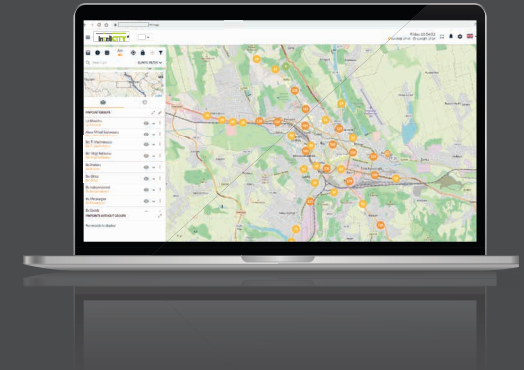

Say goodbye to the challenges of interoperability, lack of standardization, and data ownership concerns. Our integrated platform uses a two-layer technology, **inteliCITY® Software** and the **IoT Connectivity Platform**, to unlock a future-proof, centralized and efficient city management experience.

Unlimited integrations. **Centralized** city management.

inteliCITY® Software

Everything in one place. Forget about multiple data streams and multiple applications for different functions, now you can focus on what's important, rely on automations to get things done and base any optimization decisions on a wealth of available data. Everything with a sleek, clean, efficient and mobile-friendly design.

IoT connectivity platform

The silent powerhouse supporting inteliCITY solution and operating behind the scenes, the platform is integrated with interoperability standards such as TALQ or uCIFI, along with a robust suite of APIs.

Its capability to bridge multiple communication standards enables direct links to a diverse array of sensors and actuators scattered across the urban landscape, regardless of the application or provider. Also, it integrates data from various software applications, ensuring they all converge within the inteliCITY Software.
